WORK EXPERIENCE

- ***Software Engineer 2,* Microsoft,NY** (Oct 2022 - Present)
  - Working on Azure files storage team . Have completed and globally enabled several features related to improving our latency , throughput and iops by 30 percent . Worked on SMB , REST and NFS based file storage systems to improve read and write performance for file storage
- ***Software Engineer,* Morgan Stanley,NY** (Aug 2018 - Oct 2022)
  - Worked on realtime and end of day risk calculation applications for all prime brokerage and wealth management trades for morgan stanley
- ***SDE Intern,* Amazon Web Services,WA** (May 2017 - Aug 2017)
  - Worked on the AWS Codecommit Team. Developed three new API's for merging commits- Squash merge, Two branch Merge and Rebase merge. Worked on Coral, Brazil, AWS S3 and AWS DynamoDb
- ***Research Assistant,* NYU ,NY** (Mar 2017 - May 2017)
  - Extracted all the data on kiva.org using Multiple EC2 instances running in parallel. Built models in python and apache spark to predict loan behaviour and analyze all loan and lending data

PROJECTS

- **Etrade Calc engine** Worked as a lead on the scalability and optimization squad for integrating all Etrade accounts due to recent merger. Added new calculation mechanisms for margin, improved platform resiliency and account calc time by 8x for this project
- **Regression framework at morgan sanley** Built the regression framework , a separate project from scratch at morgan stanley , this service can be triggered using apis or as a batch run 3 times a day for ny, london and hong kong stock exchanges to analyze and calculate differences between realtime and end of day margins for all daily trades at morgan stanley
- **GraffitiMatch** Extracted all the 30000 graffiti images on data.sf.gov. Used this dataset to train a model using neural networks to predict if the image is graffiti or not. This project was built and presented at Techcrunch Disrupt hackathon and our submission won an award
- **Recommendation System** Used the yelp Dataset to predict business ratings using various methods as clustering, regression and Matrix Factorization. Published a paper titled "Predicting business Successfulness using Predictive data analytics " based on this project
- Contributed to **Open Source** projects.You can view my work on **my Github page -** *github.com/krnch*

EDUCATION , RELEVANT COURSES AND TECHINCAL SKILLS

- Graduated from New York University in May 2018 (Masters in Computer science) and previously graduated from Pict, pune in 2016 where i did my Bachelors in Computer Science
- Have worked with Java, C, C++ and Python over the past 8 years . Mostly backend development and some frontend development using angular, ruby and Python(flask)
- Some of my relevant graduate courses i took - Cloud computing, Big Data Analytics , Computer Vision, Artificial Intelligence, Machine Learning, Information Security and privacy

LEADERSHIP ACTIVITIES AND VOLUNTEERING

- Volunteered at the fresh air fund to teach high school students physics and computer science
- Actively involved in recruiting at morgan stanley and microsoft . Conducting interviews for new hires at morgan stanley and helping with mock interviews for students as part of employee events at microsoft
- Involved in mentoring engineers at employee resource groups at morgan stanley and microsoft
